2. Citations and explanations (Rule 70.7)

Document US 3277665 A1 which is considered to represent the most relevant state of the art, discloses a device for producing ice cubes between the low and high temperatures evaporators and with means for melting frost generated by the humidity from which the subject-matter of claim 1 differs in that an evaporator tubes with a first low and a second higher temperature section and a third section for absorbing heat from an ice fabrication device. The sections are arranged in series not in parallel as in US 3277665 A1.

The subject-matter of claim 1 is therefore novel (Article 33(2) PCT).

Claims 2-8 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
